HBCU Health Center Directory Introduction

Historically Black Colleges and Universities (HBCUs) have a critical role in ending the HIV/AIDS epidemic. Data shows that 1 in 5 new HIV diagnoses are among young people between the ages of 13 and 24 years old, with Black and Latinx youth accounting for most. To address this phenomenon, it is vital that we support, educate, and empower campuses to lead in the fight to prevent the spread of HIV among its students and community.

The HRC Foundation's HIV & Health Equity Program is dedicated to ending the HIV epidemic and increasing health outcomes through strategic partnerships with HBCUs and minority-led and serving community-based organizations by centering the lived experiences of Black youth. To that end, in late 2020 we conducted an HBCU campus health center assessment, which included 90 institutions across the United States. Developed from the assessment, this first-of-its-kind comprehensive directory will highlight the progress towards ending the HIV epidemic made by HBCUs, while underscoring the unique challenges that campuses face when addressing the gaps in linkage to HIV preventative and treatment services.

In addition to highlighting existing services on campuses across the nation, the purpose of the directory is to assist campus health centers with the facilitation of linkage to internal or external HIV prevention and treatment services for Black youth. This directory will support HBCU administrators, staff, and faculty in their work to provide culturally reflective care and work to end the HIV/AIDS epidemic.

Letter from HRC President

Alphonso David, President, Human Rights Campaign

For generations, Historically Black Colleges and Universities (HBCUs) have cultivated and supported the civil rights giants of our time, fostering the thought leadership and fellowship that has empowered young leaders to write the next chapter of our shared fight for liberation. Many of these young leaders have made important strides for LGBTQ inclusion on campus and beyond, bringing greater visibility and equality to our communities.

Yet, as we celebrate these students and their achievements, we must also recognize that they face unique challenges, particularly in terms of their health and welfare. Anti-LGBTQ

animus and structural racism fuel health inequities that put these students and all Black LGBTQ youth at greater risk.

In particular, Black gay, bisexual, transgender and queer youth bear the brunt of the HIV epidemic. And while some of the most effective interventions for addressing the HIV epidemic include comprehensive sex education and access to prevention and treatment options, many Black young people are still being denied the access and opportunities to receive these crucial resources.

The HIV crisis today is a national health injustice, one that demands action and attention from leaders at all levels. Given their transformative place in the lives of so many Black young people, including Black LGBTQ youth, HBCUs have an important role to play in helping to address this dangerous health inequity.

That is why we have put together this HBCU Health Center Directory, a first-of-its-kind initiative. Created in partnership between the Human Rights Campaign Foundation, the Black AIDS Institute and The Legacy Project, we conducted a health center/services assessment at HBCUs to identify gaps in service delivery, catalogue existing services and assist with facilitation/linkage to care for Black youth.

We hope that this directory serves as an effective resource for students, families and University leadership alike, as we work in coalition and in community to set students up for even greater success in the chapters to come. In doing so, we will help these young people usher in a future that is more just, inclusive and welcoming for all.

Letter from HRC HIV & Health Equity Director

J. Maurice McCants-Pearsall, MBA, CPH; Director, HIV & Health Equity, Human Rights Campaign

June 5, 1981, is a day that will live in infamy. On this day, the first 5 cases of what was then referred to as GRID (Gay-Related Immune Deficiency) were identified in Los Angeles. This day not only marks the beginning of the AIDS epidemic but is the starting point of one of the worst examples of medical discrimination within the United States.

For over a decade, HIV and AIDS research excluded minorities and marginalized people. It was not until 1994, when the United States Department of Health and Human Services issued guidelines that required grant applicants

to include minorities in order to receive money, that the status quo began to change. In the 13 years between the identification of AIDS and the forced inclusion of minorities in research, there was little to no government support, leading the LGBTQ community to rely even more on one another during this time of uncertainty.

While many adults were able to get the support they needed, HIV ravaged communities of black youth due to a lack of resources and education. Oftentimes, the only places that black youth could receive support from one another were at HBCUs. HBCUs (also known as Historically Black Colleges and Universities) have cultivated some of the most renowned civil rights giants of our time and have provided many queer youth a place to connect with others who shared a common experience. HBCUs also fell victim to the inaction of the U.S. government, but they still assisted and continue to maintain an important place in the sexual awakenings of many Black people.

The HIV & Health Equity and HBCU teams at the Human Rights Campaign came together to provide sexual health resources for students at HBCUs. The HBCU Health Center Directory, a first-of-its-kind initiative, was curated with these goals in mind. In partnership with the Black AIDS Institute and The Legacy Project, we conducted a health center assessment at HBCUs to identify gaps in service delivery, catalog existing services, and assist with facilitation/linkage to care for students. The idea is to continue the tradition of HBCUs acting as a mecca for students to explore their sexuality but to support them further and assure that their sexual health needs are always met.

Our team and the rest of the organization hope that this directory will serve as an important resource for students trying to protect their sexual health and those in their communities.

**“Every college student
deserves access to
excellent, unbiased care.”**

- Keisha Bell, MD, B.A., Hampton University '93

“College campus health centers are in a unique position to help students realize their potential by providing excellent care in health maintenance such as vaccination access, urgent illness, and sexual health.”

Equality for All

Human Rights Campaign Foundation

The Human Rights Campaign Foundation improves the lives of lesbian, gay, bisexual, transgender, and queer (LGBTQ) people by working to increase understanding and encourage the adoption of LGBTQ-inclusive policies and practices.

We build support for LGBTQ people among families and friends, co-workers and employers, pastors and parishioners, doctors and teachers, neighbors, and the general public. Through the following programs and projects, we are enhancing the lived experiences of LGBTQ people and their families, as we change hearts and minds across America and around the globe.

The HRC Foundation is a nonprofit, tax-exempt 501(c)(3) organization.

Human Rights Campaign Foundation HIV & Health Equity Program

The HRC Foundation's HIV and Health Equity Program is relentless in its work to combat HIV-related stigma and end the HIV epidemic once and for all. Through a range of guides, videos, publications, and images — produced in both English and Spanish — the team educates LGBTQ people and allies about the current realities of HIV as well as the effects of stigma on the very communities most in need. Among many public education efforts, the team has led campaigns endorsing the use of Pre-exposure prophylaxis (PrEP) as an effective prevention tool, expanded access to HIV prevention and treatment options at Historically Black Colleges and Universities, the need to end laws criminalizing people living with HIV, and the unique challenges facing gay and bisexual men and transgender women — especially those of color — in the South.

Human Rights Campaign Foundation HBCU Program

HRC Foundation's Historically Black Colleges and Universities (HBCU) Program mobilizes and supports HBCUs in enhancing policies and services that promote excellence in LGBTQ inclusion, equity, and engagement. We focus on promoting individual competencies and collective action, empowering leaders and stakeholders, and building a network of committed leaders in pursuit of eliminating stigma and enriching the college experience for LGBTQ students and the entire student body.

Our Partners

Black AIDS Institute – Raniyah Copeland, MPH, President & CEO

For 22 years, the Black AIDS Institute (BAI) has remained the nation's only uniquely and unapologetically Black "think and do tank." Our mission is to stop the AIDS epidemic in Black communities by engaging and mobilizing Black institutions and individuals to confront HIV. Driven by our core value of Black Empowerment, BAI's programs are led and managed by Black health experts and community advocates. BAI's national and Los Angeles-based programs encompass the spectrum of training and capacity building for the HIV workforce, community mobilization via a national network of local chapters, resource development for advocacy outreach, and direct HIV and health services. The HBCU Health Center Directory is a valuable resource, which reflects our historical engagement with traditionally Black institutions like HBCUs as an essential way to educate and mobilize Black Americans about the HIV crisis in our communities.

Guided by our motto, "Our People. Our Problem. Our Solution", the Black AIDS Institute leads a uniquely and unapologetically Black fight to end HIV. Having dedicated almost the entirety of my professional career working to end HIV in Black communities, I am clear that we cannot win the fight for the freedom and wellness of Black people without centering Black leadership.

The Legacy Project – Russell Campbell, MA, Deputy Director, Office of HIV/AIDS Network Coordination; Kenric B. Ware, PharmD, MBA, AAHIVP; Nwora Lance Okeke, MD, MPH

The Legacy Project (Legacy), a national initiative housed within the Office of HIV/AIDS Network Coordination (HANC), seeks to increase awareness of and build support for HIV prevention and treatment clinical and behavioral research by addressing factors that influence participation of historically underrepresented communities. As part of their commitment to HIV prevention, Legacy has developed a customized training curriculum to educate students and staff at Historically Black Colleges and Universities (HBCU) on the numerous methods available for the prevention of HIV – Be the Generation to End the AIDS Epidemic (BTGE) HIV Prevention Research (HPR) Training Module. The HPR training module -- a collaboration of the Legacy Project, FHI360, HIV Prevention Trials Network, and Microbicide Trials Network -- provides recent prevention research findings in a curriculum designed to increase the scientific literacy of the communities most disproportionately impacted by HIV.

HIV in Black America: Rewriting the Narrative

Nearly 40 years into the epidemic, HIV continues to be a threat within Black communities. While Black Americans make up just 13% of the U.S. population, 42% of all newly diagnosed HIV cases were among Black people. Approximately 3,300 of those new diagnoses were in young Black Americans between the ages of 13 and 24 years old. Furthermore, Black youth were also the least likely of any age group to be aware of their HIV status.

Make no mistake, communities of color are disproportionately impacted by HIV, specifically cisgender Black gay and bisexual men, transgender women, and cisgender Black women. Despite significant strides in biomedical advancements in HIV/AIDS prevention, treatment and care, the deep-seated barriers present at the height of the epidemic continue to further exacerbate disparities seen today. The health inequities in communities of color are fueled by social determinants such as socioeconomic status, housing, transportation, and institutionalized racism in the healthcare system.

“Campus health centers are a vital resource for HBCU students and can be invaluable in improving the physical and mental health of students during their course of study. When HBCUs maintain modern, inclusive, and comprehensive health centers, they are not only investing in the health of their students, but are also teaching their students to expect the same level of service in the broader world.”

Marcus Sandling MD; B.S., Morehouse College '08; MD., Howard University '12

42%

of all newly diagnosed HIV cases were among Black people

According to the Centers for Disease Control and Prevention:

HIV Lifetime risk for Gay and Bisexual Men

- 1 in 6 gay and bisexual men will encounter HIV in their lifetime ²
- 1 in 2 Black gay and bisexual men will encounter HIV in their lifetime[•]

67%

Transgender Women & HIV ³

- 46% of all transgender women are living with HIV
- 67% of all Black transgender women are living with HIV

46%

Black People & HIV

- 46% of people living with HIV in the U.S. are Black ⁴
- Black men accounted for 39% of new HIV diagnoses among all men in the U.S. ⁸
- Black women accounted for 57% of new HIV diagnoses among all women in the U.S ⁵

1 in 5

Youth & HIV

- 1 in 5 new HIV diagnoses are young people between 13 and 24 years old ⁶

Historically Black Colleges and Universities

The mission of Historically Black Colleges and Universities (HBCUs) is to serve as a major provider of education for Black Americans. Historically Black Colleges and Universities play a critical role in fostering the academic success of Black students in obtaining degrees, particularly in STEM disciplines. HBCUs have a storied history of significant contributions to the racial diversity of professional occupations such as business, politics, law, and medicine.

Additionally, HBCU campuses have long served as incubators of civil rights activity, which allows them to foster civic engagement among their students and the surrounding communities. HBCUs have played a vital part in developing civically engaged individuals by actively encouraging student participation on issues related to social justice. Countless activists and leaders have walked these campuses, adding to the cultural fabric of HBCUs. This legacy serves as a constant reminder that Historically Black Colleges and Universities have and will continue to develop the next generation of Black leaders and change agents who will make a significant impact on society.

Building on the tradition

of our institutions, HBCUs are uniquely positioned to play a pivotal role in changing the landscape for various issues and challenges across the nation.

We are confronting new and emerging social injustices related to access and equity as well as historical and persistent challenges that connect multiple identities such as sexual orientation, gender, race, ethnicity, class, and ability. Now more than ever, our campuses hold an increased responsibility in combating these challenges for the diverse communities they serve and support.

Not only do HBCUs produce world leaders in every industry, but they also produce some of the world's most innovative and renowned public health professionals. Through rigorous schools of public health, HBCUs seek to address health disparities in healthcare and improve the health outcomes of communities of color. They do this through partnerships with community-based organizations, state and local health departments, and the use of personal storytelling to advocate for policy and systemic change.

**If you are living with HIV, taking
antiretroviral therapy (ART) and have an
undetectable viral load, you are unable to
transmit HIV to your partner**

Undetectable = Untransmittable

Minority-led and Serving Community-Based Organizations

2021 marks the 40th year of the HIV/AIDS epidemic. Reflecting on the past 40 years, it is important to highlight two aspects of the epidemic that are often sidelined in this nation's HIV response.

First, Black Americans continue to face the greatest impact of the epidemic, which underscores the reality of HIV being a racial justice issue. Second, communities play a critical role in addressing the complicated health challenges we face. If we hope to end HIV, an epidemic that is heavily concentrated in Black communities, Black Americans of all walks of life will need to lead our efforts. That means that Black-led HIV organizations are crucial in getting us to the end of HIV.

The Biden-Harris Administration is the first to acknowledge racism as a public health issue. This has created an unprecedented opportunity for organizations led by Black people to educate decision-makers about the impact of anti-Black racism and the inter-connected role of structural issues such as the lack of affordable housing and quality education, healthcare access, incarceration, and other social determinants of health to HIV disparities among Black Americans. However, acknowledgment of the impact of racism must include not only immediate health outcomes, but also address how anti-Black racism impacts the availability of resources and support for Black leadership to respond to the issues that plague our community. Black leaders must have equitable resources, support, and platforms to ensure that we have the tools to respond to an epidemic that disproportionately impacts us.

In the last 40 years, revolutionary scientific progress has led to daily HIV prevention and treatment options that can end the cycle of new HIV diagnoses. However, we haven't seen the same revolutionary response and investment focused on building Black leadership. By not utilizing and supporting local, Black-led community organizations, these lifesaving interventions have not been shared with Black communities in ways that are timely, culturally respectful, and sensitive to deep-rooted medical mistrust. As we continue to leverage biomedical tools and funding, we must remember that we cannot end HIV without first ending it in Black communities, in partnership with Black-led HIV organizations.

HBCU Health Centers: Care You Can Depend On

In 2020, the Human Rights Campaign Foundation's (HRCF) HIV & Health Equity Program conducted a health center assessment at HBCUs to identify gaps in service delivery, including but not limited to HIV prevention (PrEP)/Post-Exposure Prophylaxis (PEP) and treatment, reproductive and mental and behavioral health services. In addition to identifying gaps in on-campus service delivery, the purpose of the assessment is to catalogue and educate faculty, staff and students on existing internal or external HIV prevention and treatment services and partner organizations in the area.

A total of 90 HBCUs were contacted to take part in this assessment. Results indicate that 78 HBCUs (or just under 87%) have a health center on campus and 12 that do not. Further, of the 78 schools with health centers, only 47 (about 60%) of these schools offer direct access to HIV testing on campus. Eight other schools refer students

to organizations that provide HIV testing or partner with organizations to offer testing opportunities on campus. The remaining 23 HBCUs with on-campus health centers offer no HIV testing, in addition to the 12 schools that were previously mentioned.

Based on the findings of the health center assessment, the HRCF has partnered with The Legacy Project to address gaps in HIV service delivery through in-person and virtual capacity building activities with HBCU faculty, staff and students.

*It is important to note that this data was collected in the midst of the COVID-19 pandemic, likely affecting HBCU responses to the assessment as well as the operations of health clinics at these schools.

“I believe it is critical to have Black community-based organizations that speak to the needs and issues most relevant to the members of the community.”

“It is even more important for Black LGBTQI+ folx to address the specific challenges of living at the intersection of our Blackness and our queerness. Historically we have seen this model work in advocating for ourselves during the Harlem Renaissance, the Black Arts Movement, the Black Power Movement, the Gay Rights Movement, the AIDS Crisis, and currently with Black Lives Matter.”

- Emil Wilbekin, Founder of Native Son, B.A., Hampton University '89

Special Acknowledgements

Research Team Leaders:

J. Maurice McCants-Pearsall, MBA, CPH, Leslie D. Hall, MSW

Report Authors:

Rishard Butts, Russell Campbell, Ph.D., Vanessa Castro, MPH, Raniyah Copeland, MPH, Keith Green, PhD., Ralph Jones, Rob Newells-Newton, Dimetri O'Brien, Jamie Tyson

This project reflects the collaborative efforts of various HRC team members who continuously work to ensure that LGBTQ youth and communities of color are protected and supported.

Special thank you to Alphonso David, Jay Brown and Ellen Khan for their continued leadership and support.

Thank you to Elizabeth Bibi, Matilda Young and Aryn Fields for their communications and digital strategy efforts. Thank you to Kelly Stam, Emily Simeral Roberts, Curtis Clinch for their marketing and design efforts.

Thank you to Que Hughes for his efforts and vision in designing and shaping this project.

We would also like to thank Gilead Sciences for their generous support that helped us create this important resource.
